Irradiation in production
processing and handling
of food

I urge retention of the label stating this food has been
treated by irradiation, as well as carrying the radura, the
international symbol. There is a vast difference between
irradiation and cold pasteurization, the suggested new label.
Irradiation kills vitamins and creates a new class of URPS
(radiolytic products that have not been tested.) Truth labeling
must be retained. Thank you for involving the consumer in
this important issue.

Sincerely,

Becky Song
